## SAWN STONES

15 | 20 | 30 cm.

1,5-2,5 cm.

EXTERIOR

INTERIOR

WALL

FLOOR

The Villafranca quartzites can also be presented in regular formats of 15, 20 or 30 centimetres. The length of the tiles is adaptable to any size and can vary from one piece to another, which allows a harmonic arrangement of the joints. The natural finish gives a unique and contemporary character to any kind of project.

## MASONRY

MAX. 12 cm.

VARIABLE

4-10 cm.

EXTERIOR

INTERIOR

Masonry is one of the more traditional building systems. For this building technique the Villafranca quartzites offer a block format in two tones : light (with brown, beige and pink shades) and the dark (with predominance of gray tones). It's a hand-carved format with variable length, whilst the height may go from 4 to 10 centimeters and the maximum depth is 12 centimeters. It's an ideal option to give a rustic look to any building project and it's also suitable for combinations with other materials such as wood or glass for modern facades.

DIRECTLY FROM OUR OWN QUARRIES

### AN EXCLUSIVE PRODUCT BY CUPA STONE

The Villafranca quartzites are natural stones that CUPA STONE offers in exclusivity, extracted directly from the quarries owned by the company on the Northwest of Spain, specifically on the Bierzo area.

CUPA STONE controls the chain of value of this material, from extraction to commercialization, including transformation and distribution, which is a warranty of quality, due to its capability to take care of every detail in each part of the process.

A UNIQUE, MULTI-FUNCTIONAL AND RESISTANT MATERIAL

### THE CHARM OF RUSTIC SETTINGS

Our quartzites can be produced in diverse formats -from the raw slab, of barely two centimeters of thickness, to the masonry block- this makes the possibilities of the quartzites almost unlimited. At the same time, they can give a special rustic look to every setting. Streets, squares, roads, terraces, closing walls, facades, steps, fireplaces, archs, pillars, stairs... Everything is possible with the quartzites of Villafranca!

AN EXCLUSIVE PRODUCT BY CUPA STONE

# VILAFRANCA QUARTZITES

## RESISTANT

- It's a stone of great hardness, almost unalterable, that maintains its properties over time
- Low water absorption
- It has a high frost resistance

## VERSATILE

- The variety of formats makes the quartzites a material with almost unlimited uses, for all kinds of buildings and decorative applications: wall cladding and interior/exterior flooring.

## ELEGANT

- Villafranca Quartzites stand out by its brilliant texture which gives the pavement or cladding a refined and great quality style.

## TECHNICAL SHEET

- VOLUME MASS: 2,71 - 2,72 g/cm<sup>3</sup>
- ABSORPTION: 0,13 - 2,72 g/cm<sup>3</sup>
- MECHANICAL RESISTANCE TO COMPRESSION: 35,91 - 59,21 mpa
- RESISTANCE TO COMPRESSION AFTER FREEZING: 173.333 kp/cm<sup>2</sup>
- MECHANICAL RESISTANCE TO FLEXION: 13,87 - 20,57 MPa
- RESISTANCE TO EROSION: 5,79 - 11,52 mm
- RESISTANCE TO IMPACT: 71,25 - 102,50 cm
